

CDP is the Nation's premier provider of data management systems and services for the public health community. Our diversified portfolio allows us to operate successfully from Alaska all the way down to the southern tip of Florida. While our competitors attempt to answer your questions, we will be there to create solutions long before problems arise. CDP's vast array of offerings gives us a nuanced perspective from which we use to understand the whole picture. So at the end of the day do you want answers or solutions? Built on family values, CDP operates with integrity because it's more than just a company on the line; it's our legacy at stake.

CDP is positioned (*like no other vendor*) to provide solutions depending on our client's needs – all of which can be integrated:

- Provide our Modifiable Commercial-off-the-shelf (COTS) data management solutions:
  - 2011/2014 **Certified EMR, Practice Management, and available Revenue Cycle Management (RCM) solution for Public Health specifically – ezEMRx**. ezEMRx was built from the ground up with interoperability and HIE readiness in mind. ezEMRx integrates using healthcare standards and protocols. Integration is made possible using the ezEMRxHIE platform (ezEMRx's own HIE portal) geared towards clinical data exchanges.
  - **Environmental Health** including but not limited to inspections, permits, billing, and offline mobility.
  - **WIC MIS & WIC EBT (WICDirect)**, including its ancillary products.
  - **Home Healthcare** including but not limited to the complete OASIS/Comprehensive Assessment through comprehensive billing.
  - **DataDirect** a data warehouse for the valuable, detailed information that is generated by Operations to empower state and local agencies to translate data into active program monitoring, management, and evaluation - all in an effort **to guide better decisions leveraging analytics**.
- Serve as a **"System Integrator"**. Our unparalleled depth of knowledge and experience in public health technology can help integrate isolated systems that contain valuable data; and therefore, result in information tools that benefit patients, providers, and the general public.
  - *Most governments still work very much in silos, where agencies have their business systems and IT supports them. CDP is working to break down those silos as much as we can and foster collaboration across departments resulting in efficiencies and cost savings.*
- New Custom development to meet unique requirements utilizing agile development best practices constantly measuring trajectory of the project.
- Maintenance/enhancement of customer's systems already in operation.

## Current Clients

- **South Dakota - WIC EBT:** Development, Maintenance and Operations
- **West Virginia – WIC EBT:** Development, Maintenance and Operations
- **Wisconsin – WIC EBT:** Development, Maintenance and Operations

In line with current trends and public acceptance and expectation of doing business and receiving services electronically, CDP will continue its initiatives to enhance our solutions and functionality to meet the growing needs of our public health client base while focused on three important pieces: **security, portability, and interoperability.**

CDP understands government processes and regulations in the public health industry, having developed customized solutions to help agencies meet federal and state guidelines and electronic business requirements. Our team includes many key members who are former government employees. We understand the need for cost controls, stakeholder participation, predictable outcomes, and high quality product. We have well-defined business practices for refining, quantifying, and managing the scope of an effort including a rigorous requirements management and change process.

CDP provides a unique opportunity because all of our customers are government agencies and are not in competition with each other. We continually bring our customers together and enable them to collaborate and share ideas ... thus providing better insight into the unique functionality that government requires. The intent is to share, not to accumulate and shield.
